

Ebola Information
Through
Organization for Safety, Asepsis and Prevention (OSAP) Link

The ADA, CDC, and OSAP have worked together to provide the most up to date resources for practitioners on Ebola Virus Disease. It is the responsibility of all healthcare providers to understand this important pathogen and to educate our patients as well as protect them and our staff from contracting the disease. OSAP has allowed DECS to share a link to their toolkit with background and resources to help clinics be prepared for ill patients and protocols outlining what to do for routine encounters and emergency situations.

Please continue to monitor these resources and the DECS website and Facebook pages for updates to this and other emerging infection control issues. Thank you for your continued focus on patient and staff safety.
